

# Managed AI agents for growing companies

We serve your customers, take over repetitive work and organize your data with artificial intelligence agents that we build, run and measure for you.

EXECUTIVE SUMMARY

### What we do

We design, deploy and run AI agents that sell and support customers 24/7, automate back-office tasks, integrate your systems and produce reports. It's a managed, measured service, not a software license.

### How you pay

A one-time setup and a fixed monthly fee, with AI usage included. From USD 290 a month for an agent that works around the clock.

### Who it's for

Growing companies that need to serve more customers, sell more or operate with less manual work, without their team and costs growing at the same pace.

### What you risk

Very little: your first agent is live in under 48 hours, you can start with a 30-day pilot, there's a 90-day results guarantee and no lock-in.

|                                                                     |                                                          |                                                 |                                                        |
|---------------------------------------------------------------------|----------------------------------------------------------|-------------------------------------------------|--------------------------------------------------------|
| <b>&lt; 48 h</b><br>from kickoff to your first agent up and running | <b>24/7</b><br>continuous service, no shifts or overtime | <b>10</b><br>industries with delivered projects | <b>3</b><br>countries: United States, Mexico and Chile |
|---------------------------------------------------------------------|----------------------------------------------------------|-------------------------------------------------|--------------------------------------------------------|

WHY QOVANT

### Speed

Your first agent runs on a real case in under 48 hours, not after months of project work.

### A service, not software

We build it, run it and improve it every month; your team doesn't need developers.

### Bounded cost and risk

A fixed monthly fee with AI usage included, a results guarantee and no lock-in.

THE SOLUTION

## Six specialized agents that work as one team

Each agent handles a specific process. They're deployed one at a time, starting with the one with the most impact, and they coordinate as your operation grows.

| OUTCOME              | AGENT          | WHAT IT DOES                                                                                       | HOW IT'S MEASURED            |
|----------------------|----------------|----------------------------------------------------------------------------------------------------|------------------------------|
| Sell and support     | <b>IMPULSO</b> | Prospects, replies, quotes, qualifies leads and books meetings on WhatsApp, Instagram and the web. | Response time, conversion    |
|                      | <b>FARO</b>    | Resolves questions and complaints at any hour and hands off to a person with full context.         | Satisfaction, cases resolved |
| Run without friction | <b>OPERA</b>   | Records invoices and orders, validates data, generates documents and moves approvals along.        | Hours freed, errors          |
|                      | <b>NEXO</b>    | Connects your ERP, CRM, online store and spreadsheets so information updates itself.               | Rework, up-to-date data      |
| Decide with data     | <b>CAUDAL</b>  | Turns your data into forecasts, alerts and margin analysis.                                        | Margin, stockouts, churn     |
|                      | <b>CRÓNICA</b> | Prepares automated reports with an executive summary of what changed and why.                      | Reporting time, timeliness   |

**Where to start:** with the highest-volume process or the one that hurts most. Many companies begin with sales or support on WhatsApp, because the impact shows quickly and is also measured in revenue. You'll find 20 ready-to-launch quick wins at [govant.ai/en/catalog](https://govant.ai/en/catalog).

### Proven experience

Projects delivered in 10 industries: mining (our main sector, in partnership with a specialized consultancy), e-commerce, healthcare, real estate, education, distribution, logistics, adventure tourism, hospitality and emergency services. Services available for the sales, marketing, customer service, finance and human resources functions of any company.

### Built on the systems you already use

50+ ready-made integrations, including WhatsApp Business, HubSpot, Salesforce, SAP, Odoo, Shopify, VTEX, Mercado Libre, Google Workspace, Microsoft 365 and Power BI. Any other system connects via API, database, spreadsheets or email, without changing your tools.

HOW WE WORK

# Results in days, with management in control

|               |                                                                                                                      |               |                                                                                                    |
|---------------|----------------------------------------------------------------------------------------------------------------------|---------------|----------------------------------------------------------------------------------------------------|
| DAY 0         | <b>Free assessment</b><br>30 minutes to prioritize the process where an agent pays off most and estimate the impact. | DAY 1         | <b>Kickoff</b><br>We agree on goals, systems, data and the metrics we'll use to measure success.   |
| < 48 H        | <b>First agent live</b><br>A real version running on a case from your business, ready to test.                       | SHORT SPRINTS | <b>Tuning with your team</b><br>We review results and improve until it does exactly what you need. |
| YOUR APPROVAL | <b>Launch</b><br>It goes live only when your team approves it, with training included.                               | EVERY MONTH   | <b>Run and improve</b><br>We run it, monitor it and deliver an impact report.                      |

Management stays in control

- ✓ Metrics agreed at kickoff and measured every month.
- ✓ Nothing goes live without your team's approval.
- ✓ Handoff to people for anything that needs judgment.
- ✓ No in-house technical team needed: we build, run and maintain.
- ✓ No change to your systems: agents work on top of them.

VERSUS THE ALTERNATIVES

|                        | HIRING MORE PEOPLE               | GENERIC CHATBOT                    | TRADITIONAL AI PROJECT    | QOVANT                             |
|------------------------|----------------------------------|------------------------------------|---------------------------|------------------------------------|
| First results          | Weeks, after hiring and training | Days, with scripted answers        | Months of development     | Under 48 hours                     |
| Fit with your business | Over time                        | Low, not connected to your systems | High                      | High: your information and systems |
| Who maintains it       | Your team                        | Your team                          | Your team, once delivered | Qovant, every month                |
| Cost                   | Fixed salaries that grow         | License plus your time             | High upfront investment   | Setup plus a fixed monthly fee     |

INVESTMENT AND RETURN

Predictable investment, measurable return

A one-time setup to build the solution and a fixed monthly fee to run it, with AI usage included. Prices in US dollars, excluding taxes.

|                                | Agent                                  | RECOMMENDED<br>Team                                     | Ecosystem                                |
|--------------------------------|----------------------------------------|---------------------------------------------------------|------------------------------------------|
| Monthly fee                    | USD 290                                | USD 790                                                 | from USD 1,990                           |
| One-time setup                 | USD 990                                | USD 2,990                                               | from USD 7,900                           |
| Annual billing (2 months free) | USD 2,900                              | USD 7,900                                               | from USD 19,900                          |
| Agents                         | 1                                      | Up to 3, coordinated                                    | Based on scope                           |
| Channels                       | 1                                      | Up to 3                                                 | All the ones you use                     |
| Conversations or tasks a month | 1,000                                  | 5,000                                                   | Custom                                   |
| Integrations                   | Up to 2                                | Up to 5, incl. ERP or CRM                               | Based on scope                           |
| Ongoing support                | Monthly improvements and impact report | Plus weekly reporting and a monthly improvement session | Plus SLA, dedicated environment and team |
| Best for                       | One specific process                   | Selling, supporting and operating at once               | Multiple areas, data and forecasts       |

Systems without an API or custom development are quoted separately. Ecosystem is quoted after the assessment.

Ways to start

30-day pilot: USD 490

One agent on a real process, measured for 30 days. If you continue, it's credited in full toward your setup.

Add-ons

Additional agent from USD 250 a month; additional channel or integration from USD 390. Extra volume and WhatsApp messages, at cost.

How to estimate the return

Repetitive hours per month × share the agent takes over × hourly cost, plus the sales you lose today by replying late, minus the monthly fee.

Illustrative example: 4 people spend 10 hours a week on repetitive tasks (≈ 173 h a month) and the agent takes over half (≈ 87 h).

| HOURLY COST                      | MONTHLY VALUE | VERSUS THE AGENT PLAN                                              |
|----------------------------------|---------------|--------------------------------------------------------------------|
| USD 20 (United States reference) | ≈ USD 1,730   | 6 times the monthly fee; the setup pays back in under a month      |
| USD 8 (Latin America reference)  | ≈ USD 690     | 2.4 times the monthly fee; the setup pays back in about 2.5 months |

Not counting additional sales. In the assessment we run the numbers with your data.

## RISK AND NEXT STEPS

# A low-risk decision

### 30-day pilot

Try the service on a real process for USD 490, credited toward your setup if you continue.

### Results guarantee

If we haven't hit the metric agreed at kickoff after 90 days, you don't pay the following month.

### No lock-in

Plans are monthly and can be canceled with 30 days' notice.

### Your data is yours

Your data, knowledge bases and configurations belong to you, with a full export if you leave.

## SECURITY AND COMPLIANCE

- ✓ Encryption in transit and at rest; role-based access and activity logs.
- ✓ Your data is never used to train public AI models.
- ✓ Confidentiality and data processing agreements in every contract.
- ✓ Sensitive decisions, such as hiring or health matters, are always reviewed by a person.
- ✓ Leading models (Claude, GPT, Gemini) or open source per task, with no dependence on one provider.
- ✓ Privacy, data protection and cookie policies published at qovant.ai.

## NEXT STEPS

01

### Free assessment

30 minutes to understand your operation and prioritize processes.

02

### Proposal

Plan, price and metrics for your case.

03

### Kickoff

Your first agent live in under 48 hours.

## Book your assessment

No cost, no commitment: all you need is to know your operation.
